

SABI

MICROFINANCE BANK

Bank Portal User Guide

A practical guide to creating, reviewing,
approving, and managing payment vouchers.

PRIMARY MODULE

Payment Voucher

Version 1.0 | September 2026

For staff, reviewers, administrators, and operations support

How to use this guide

This guide describes the current SABl Microfinance Bank portal experience.

The SABl portal is an internal workspace for preparing payment requests, routing them through controlled approval stages, managing staff and departments, and keeping a searchable record of payment vouchers. Access is based on the signed-in user's role.

What the portal helps you do

- Create a payment voucher with a payee, department, expense lines, quantity, amount, total, and amount in words.
- Send the voucher through the configured approval route: HOD, ICU, CFO, and MD.
- Review assigned vouchers and approve or reject them with a comment when needed.
- Let administrators manage staff accounts, departments, voucher records, and approval-flow information.
- Manage account details, change a password, and sign out securely.

IMPORTANT

The Documents navigation item is visible in the workspace but is currently marked “soon”. The active document export feature is available to administrators from All vouchers, where a voucher can be downloaded as PDF or DOCX.

Who uses which area

User type	Main access	Typical responsibility
Staff / initiator	Payment vouchers, profile	Prepare and submit payment requests.
HOD, ICU, CFO, MD	Payment vouchers, approvals, profile	Review vouchers at the assigned stage.
Administrator	Admin control center, profile	Manage people, departments, vouchers, and flow reference.

Getting started

Sign in, understand the workspace, and keep your account secure.

Sign in

- 1 Open the portal**
Use the portal address provided by your operations or technology team.
- 2 Enter your credentials**
Use your registered email address and password.
- 3 Confirm your workspace**
Staff land in Payment vouchers. Administrators land in the admin control center. Reviewers can open Approvals when vouchers are waiting for their role.

Main navigation

Area	What it contains
Payment vouchers	The staff workspace for creating a voucher and searching your recent voucher records.
Documents	Reserved for a future document workspace and currently labelled “soon”.
Approvals	Visible to HOD, ICU, CFO, and MD users. Shows vouchers waiting at that reviewer's stage.
Profile settings	Account information, role and department details, password change, and sign out.
Admin control center	Administrator-only overview, staff accounts, departments, all vouchers, and approval-flow reference.

Account security

- Use Profile settings to view your username, email, role, and department.
- To change your password, enter the current password, a new password of at least eight characters, and the matching confirmation.
- Sign out when leaving a shared or unattended workstation.

Payment Voucher

The first module and the starting point for a controlled payment request.

A Payment Voucher (PV) records who should be paid, which department owns the request, what is being purchased or reimbursed, and how much it costs. After it is created, the voucher becomes part of the approval workflow and can be tracked by its unique PV number.

Voucher form at a glance

Field	What to enter	Why it matters
Payee	The person or organisation receiving payment.	Identifies the recipient.
Payment voucher no.	The generated PV number. It is read-only.	Provides a unique reference for searching and review.
Department	The department responsible for the request.	Determines the department context and the HOD review route.
Date	The date shown while preparing the request.	Helps the user identify the request in context.
Particulars	One or more expense descriptions.	Explains exactly what the payment covers.
Quantity	The number of units for a line.	Used with amount to calculate the line total.
Amount	The unit amount in naira for a line.	Used with quantity to calculate the line total.
Amount in words	The total written in words, for example "One hundred thousand naira only".	Makes the printed voucher easier to verify.

BEFORE YOU SAVE

Check the payee spelling, select the correct department, describe each expense clearly, and confirm that the calculated total agrees with your supporting request or invoice.

Creating a Payment Voucher

Follow these steps from the Payment vouchers workspace.

- 1 Start a new request**
Open Payment vouchers. The page opens in Draft mode with a new payment voucher number being generated.
- 2 Enter the payee**
Type the full name of the person or organisation to be paid.
- 3 Confirm the PV number**
The system supplies the payment voucher number. Do not overwrite it; use it as the reference for follow-up.
- 4 Select a department**
Choose the department responsible for the expense. This is required because the department HOD is the first reviewer.
- 5 Review the date**
Use the date shown for the request. The saved record also receives its creation timestamp.
- 6 Add particulars**
Enter a short, specific description such as "Office printer toner". Select Add line for each additional item or service.
- 7 Enter quantity and amount**
Quantity must be at least 1. Amount must be zero or greater. The total updates automatically as quantity × amount for every line.
- 8 Write the amount in words**
Enter the total in words and compare it with the numeric total.
- 9 Save the voucher**
Select Save as draft. A confirmation appears and the voucher is added to Recent vouchers. The backend then starts the HOD approval route when an active HOD is configured.

GOOD PARTICULARS

Use descriptions that another reviewer can understand without asking for clarification. Include the item or service and, where useful, a period, project, or purpose.

Payment Voucher workflow

What happens after a voucher is saved.

Approval route

Stage	Reviewer	What happens
1	HOD	The department Head of Department checks the request first.
2	ICU	Internal Control Unit performs the next control review.
3	CFO	The Chief Financial Officer reviews the financial request.
4	MD	The Managing Director provides the final approval decision.
5	Approved	The voucher has completed the configured approval route.

Voucher statuses

Status	Meaning
Draft	The voucher is being prepared or has been saved from the entry screen.
PENDING_HOD	Waiting for the department HOD.
PENDING_ICU	Waiting for Internal Control Unit.
PENDING_CFO	Waiting for the Chief Financial Officer.
PENDING_MD	Waiting for the Managing Director.
APPROVED	The final approval stage has accepted the voucher.
REJECTED	A reviewer rejected the voucher. The rejection reason should explain what needs attention.

ROUTING REQUIREMENT

An active HOD must be configured for the selected department. Active reviewers must also exist for the next approval stage before a reviewer can approve and move the voucher forward.

Reviewing and deciding approvals

For HOD, ICU, CFO, and MD reviewers.

Open your review queue

1 Open Approvals

Select Approvals from the workspace navigation. The queue shows vouchers assigned to your role and current stage.

2 Check the progress indicator

The stage tracker shows which step you own and how the request moves through the strict approval flow.

3 Select a voucher

Review the PV number, payee, total amount, current stage, and every particular line.

4 Choose a decision

Select Approve voucher or Reject voucher.

5 Add a comment

A comment is optional for approval. A rejection reason is required and should be specific enough for the initiator to correct the request.

6 Submit

Select Approve and continue to send the voucher to the next stage, or Reject voucher to end the current route with a rejection status.

What reviewers should verify

- The payee matches the supporting document or request.
- The department and HOD route are correct.
- Each particular is clear, necessary, and supported.
- Quantities, unit amounts, numeric total, and amount in words agree.
- The request is not a duplicate and is currently at your stage.

CONCURRENT REVIEWERS

More than one active reviewer may be assigned to a stage. Once an authorised reviewer decides, the voucher advances or is rejected and other pending assignments for that stage are cancelled.

Administration and records

Administrator features for keeping the portal ready.

Admin control center

Admin area	Available actions
Overview	See staff, active-account, department, and pending-invite counts; use quick actions; view the configured route.
Staff accounts	Search staff, create a staff account, assign department and role, and activate or disable access.
Departments	Add a department with a name and optional code, view available departments, and delete a department after confirmation.
All vouchers	Search every voucher by PV number, payee, or status; view department and amount; download a voucher as PDF or DOCX.
Approval flow	View the configured reference stages from PENDING_HOD through APPROVED.

Voucher downloads

From All vouchers, an administrator can download a selected voucher as PDF or DOCX. The generated record includes the PV number, payee, department, date, status, particulars, total, amount in words, and approval history when available.

Recent vouchers

The staff workspace shows a Recent vouchers panel with a search box. It is intended to help the signed-in user find vouchers they created by PV number or payee. The list displays the PV number, payee, and total amount.

OPERATIONAL NOTE

The portal is the record-entry and approval workspace. Keep invoices, receipts, and other supporting evidence according to the bank's document-retention process, especially while the Documents workspace is still marked "soon".

Troubleshooting and good practice

Common messages and the quickest response.

Message or symptom	What to check
Unable to generate payment voucher number	Confirm the backend is reachable and try again. Do not invent a replacement PV number.
Departments are still loading	Wait for the department list to load. If it remains empty, contact operations support.
No active HOD approver is configured	Ask an administrator to configure an active HOD for the selected department.
No active next-stage approver	The current reviewer cannot advance the voucher until the next role has an active approver.
Rejection reason required	Select Reject voucher and provide a clear reason before submitting.
Voucher is not at your stage	Refresh the queue. Another reviewer may have already decided it, or the voucher may have moved forward.
Access denied or session expired	Sign in again. If the account is inactive or the role is incorrect, contact an administrator.
No vouchers yet	Use the Payment vouchers form to create one, or broaden the search text.

Quality checklist

- Use one line per distinct item or service.
- Avoid vague descriptions such as “expenses” or “miscellaneous”.
- Check naira amounts and quantities before saving.
- Keep the PV number in any related communication.
- Review the status and approval stage before following up with a reviewer.

SUPPORT

For access, routing, or system errors, contact operations support and include the PV number, your role, the action you were taking, and the exact message shown.
